Integrated rack solutions for ultrafiltration

## T-Rack® 3.0 – state-of-the-art ultrafiltration solutions

- **Proven T-Rack® 3.0 concept – safe and reliable operation**
- **dizzer® UF modules with 80 m<sup>2</sup> – more performance per module**
- **Less UF modules – reduced shipping costs and assembly time**
- **Extremely compact footprint – high treatment capacity**
- **Optimized for sea water – highest corrosion resistance class (C5)**
- **Modular design – great flexibility and extension ready**
- **Plug-and-play installation – easy to assemble on-site**

We carefully tailor our product development to the needs of the market and our customers' requirements. That's why we've decided to further address the specific requirements of larger-scale filtration systems (e.g. those used for pretreatment in sea water desalination or waste water reuse) by introducing a UF module with 80 m<sup>2</sup> filtration area for our time proven, ultra-compact and T-Rack® 3.0.

### More performance with dizzer® XL 0.9 MB 80 WT

When combined with T-Rack® 3.0, the new 80 m<sup>2</sup> UF module enables a significant footprint reduction, while providing outstanding treatment capacities. A T-Rack® with the maximum size of 120 modules, operated at 80 LMH (47 gfd) can provide a water treatment capacity of approx. up to 760 m<sup>3</sup>/h (4.8 MGD). This approach also results in fewer UF modules which translates into lower shipping costs and faster assembly times on-site.

### Extremely compact footprint

Integrating the header pipes in the module end caps enables us to position the modules closer together in the rack. This space-saving design gives the T-Rack® 3.0 a footprint that is up to 60 percent smaller than conventional rack designs. By using standardized components, inge® is offering a fully scalable solution, while providing practical serviceability on-site.

### Modular design, extension ready

The standardized components and modular design of the rack allow for a quick and easy expansion of capacity to reflect changing treatment parameters. Additional UF modules can be added at any time.

### Easy on-site assembly

With a plug-and-play solution in mind, the T-Rack® 3.0 and the corresponding dizzer® UF modules with 80 m<sup>2</sup> do not require specialized equipment or training to assemble, thereby supporting easy installation and system integration.

### Full flexibility

The more flexibility you have to configure a system, the more you can tailor it to your exact requirements. Depending on the required system size and treatment capacity, we can supply configurations with either two or four rows of modules. However, the design includes separate filtrate headers, so each row can still be operated as a separate filtration line. For systems containing 72 modules or more, the racks are arranged on both sides of a manifold unit. inge® offers the option of providing the manifold unit as a T-Rack® Manifold.

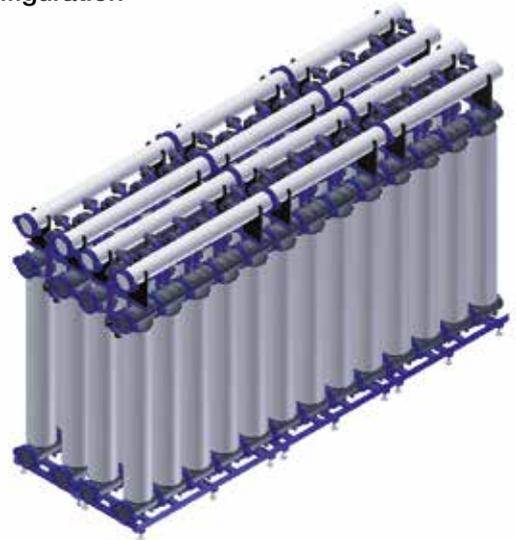

## T-Rack® 3.0 – flexible design for maximum performance

### Rack configurations (examples)

### Optional features

The standard version of the racks features C5-coated frame profiles. A stainless steel version is also available on request.
