

Residential RO Elements with 50% Higher Flow!

Introducing the disruptive
Aquaporin Inside™ Residential
Reverse Osmosis elements with
50% higher water flow and
improved recovery compared to
conventional high-end brands.

Thanks to nature's own water
channels we have revolutionized
the performance of tap water
reverse osmosis membranes.

Experience the Aquaporin Inside™ Reverse Osmosis Residential Element!

**With the revolutionizing high water flow,
you will experience**

- 🌱 Lower price per gallon of treated water
- 🌱 Increased capacity of your household water purifier
- 🌱 Overall smaller and smarter system design
- 🌱 New and better user experience

Recovery outcompetes conventional elements

- 🌱 Lower environmental impact
- 🌱 Cheaper water bill to consumer

The best quality water.

The Aquaporin Inside™ element gives you better rejection of unwanted compounds compared to conventional RO technology, ensuring the best quality water for your wellbeing.

How is this possible?

The aquaporin water channel is the essential building block of the Aquaporin Inside™ technology. Aquaporin proteins maintain the water balance in all living organisms and are highly selective – allowing only water to pass and rejecting all contaminants.
