

Vessel Servicing

CPL Carbon Link offers a complete vessel servicing programme to help keep costs under control, and ensure that all site waste and environmental requirements are met.

Our vessels are available to purchase or rent on a short or long term basis. They're also suitable for transportation, removing any need for on-site carbon handling.

Vessels can be delivered by crane-vehicle (if required), and are pre-filled with activated carbon and ready to be piped into a waste stream via the quick fit connectors, valves, and pipe-work already fitted to the vessel. Our vessels are designed for upright transportation, avoiding awkward and expensive laying down procedures.

Once the carbon is saturated, or a project is completed, CPL Carbon Link can arrange for vessel collection and return to our licensed waste transfer servicing site. The vessels are discharged, cleaned, and serviced prior to being recharged with virgin or reactivated carbon. Our sites operate under full compliance with all environmental and waste handling directives and guidelines.

Waste carbons are reactivated at our state of the art UK regeneration facility at Immingham. This minimises costs and adverse effect on the environment by significantly reducing the amount of waste carbons sent to landfill. CPL Carbon Link will also carry out on-site servicing of vessels should this be the preferred option due to vessel size or site access.

Regen-Sys[™]

Our Comprehensive Emission Management and Activated Carbon Regeneration Service.

Our Regen-Sys vessel servicing programme offers complete control of your vapour and liquid phase adsorption needs.

- ✓ Reduce your carbon footprint
- ✓ Regeneration
- ✓ Hassle-free filter vessel management
- ✓ No capex requirement
- ✓ Experienced vessel service team

Clean-Flo[®] VOCSorbers

CPL Carbon Link's range of VOCSorbers are designed for use in air and gas phase applications, and are available in sizes from 0.5m³ to 22m³. Larger vessels can be supplied by arrangement.

Our vessels are available on full service or short/long term rental. We can offer a package to suit your medium to long term site requirements as well as catering for the needs of a particular short term project.

Clean-Flo[®] AquaSorbers

CPL Carbon Link's range of AquaSorbers are designed to meet the adsorption needs for liquid phase applications, and are also available in a wide range of sizes to fit with application needs.

The vessel design enables the simple removal of spent carbon with the minimum of labour via the large side manway. The unit can be quickly filled from a bulk bag using the top filling port.

- **Clean-Flo[®] AT1, HY1**
- CPL Carbon Link also offers a standard range of small modular filters for use in liquid and vapour phase applications. The
- **Clean-Flo[®]** modular filters provide a solution to the control of
- VOC emissions to the atmosphere, and prevent the discharge
- of dissolved organics over permitted levels. These units are
- ideal for use in low cost plant trials before committing to
- larger vessels and long term rental.
