

KNOW-HOW & HIGH QUALITY ENGINEERING

Thanks to its own engineering capabilities and supported by a partnership with Madrid Polytechnic University, Alucovers® has developed specific design tools which enable extremely flexible use while guaranteeing complete control over the structural dimensioning and calculation processes. Alucovers® can now operate anywhere around the world and work according to a wide range of construction codes, in particular:

- △ EUROCODE (Europe)
- △ ASCE 07-10 and ADM (United States)
- △ NBCC (Canada)
- △ BCA and NCC (Australia)
- △ And many more.

Alucovers® designs marine quality self-supporting aluminium coverings. Waterproof, light and easy to install, Alucovers® coverings withstand atmospheric corrosion, which gives them an exceptional lifetime (over 50 years) and makes them a product which does not require any maintenance.

All of our coverings are manufactured in ISO 9001-certified factories, are EC-marked and compatible with the implementation of odour treatment systems.

HYDROCARBON TANKS - INDUSTRIAL INSTALLATIONS - WATER TANKS

ALUCOVERS®

was born from the Joint-Venture between Apro Industrie and JSF Hidraulica, two complementary companies which wanted to share 60 years' experience and several thousand references.

APRO Industrie

A French company which specialises in manufacturing and building storage tanks, Apro Industrie has been the French leader on the bolted metallic tanks market for over 30 years, with references on every continent.

JSF Hidraulica

is a Spanish company which specialises in designing and manufacturing metal structures. Created in 1995, it has established itself as the leader on the Spanish market by specialising in the area of aluminium coverings in particular, while managing to maintain its ability to design extraordinary structures.

▲ ALUCONE

Self-supporting conical roofing enabling the coverage of circular tanks up to 18m.

▼ ALUDOME

Self-supporting geodesic domes designed according to AWWA, EUROCODE or API 650 enabling the coverage of circular tanks, with no limitation in diameter.

▲ ALUGRECA

Self-supporting flat, trapezoidal groove roofing, enabling the coverage of wide range of structures (circular tanks, rectangular tanks, buildings, etc.) with a potential range of up to 14m.

▼ ALUPLAN

Self-supporting flat roofing, enabling the coverage of wide range of structures (circular tanks, rectangular tanks, buildings, etc.) with a potential range of up to 10m. Easy dismantling for covered structure maintenance operations.

▼ SPECIFIC SOLUTIONS

Alucovers® are also rigid made-to-measure coverings, tensile structures, architectural solutions or even floating coverings.
