

BOBBIN WOUND FILTER

ARM COLLECTORS & NOZZLE PLATE

Industrial warranty : 10 years on tank
2 years on components

STRUCTURE AND EQUIPMENT

Liner made of reinforced fibre glass polyester resin : composed with 2 elliptical curved bases and a collar. Axial and radial fibre glass and polyester resin bobbin wound, enabling a smooth balance of pressure.

Upper curved bottom equipped with a centered $\varnothing$ 400 mm stratified manhole with gel coated cover and flat joint, for inspection, filling and access to equipment.
Variable cylindrical collar height allowing the use of a 1 m or 1.2 m filter bed. The 1.2 m is "High Performance".

Stratified conic base 500 mm high, with a perimetric seating rim of 35 to 50 mm to distribute loads on floor.

Inner air bleed by PE tube equipped with strainer.

I/O connections by standardized collars / offset flanges made of PVC, minimum PN10 pressure.

1 1/2" threaded tap on air bleed with manual valve (not supplied).

Drain plug with strainer and 1" threaded water drain connection with manual valve (not supplied).

Upper disperser/diffuser(*), made of PVC or fibre glass and inverter funnel type. Held by bracket.

Nozzle Plate

Lower collector floor, made of glass fibre and polyester resin equipped with nozzles (50 per m² for a speed less than 1 m/s), and long-tail expansion sleeve (110 mm), for back washing or air scour, and 0.30 mm slots.

Collector Arm

Lower collector is PVC strainer type, equipped with PVC tubes, $\varnothing$ 50 to 63 mm (dependant on diameter of filter), with 0.30 mm slots facing downward to enable recovery of filtered water at a speed less than 1m/s.

All filter inner nuts and bolts of quality A4 – 316 L.

All nuts and bolts inside the filter to A4 grade.

Cover and baseplate : RAL 9016

Winding : RAL 5005

All branch connections are sealed by DAQUA standard interior polyester lamination (and not by using nuts and bolts).

THE + PRODUCT

- + From standard to tailored
- + Adaptable to many filtration media
- + Ease of maintenance
- + 20 years of feedbacks

APPLICATION

Mechanical filtration intended for public swimming pool, aquarium or similar applications.

Water treatment

Max. service pressure : 2.5 bars, 4 bars & 6 bars

Test pressure : 3.75 bars, 6 bars and 9 bars according to standard NFT 57:900.

Utilization temperature : 10 to 40°C.

Utilization pH : 6.5 to 8.

Indicative flow rate : 17 to 353 m³/h, dependant on filter diameters and filtration rates.

Filtration speed : 1 to 50 m³/h.

SPOTLIGHT

Flow rate: 25 to 353m³/h

Diametre : 1050 to 3000 mm

BOBBIN WOUND FILTER

ARM COLLECTORS & NOZZLE PLATE

DESCRIPTION

DAQUA controls the entire process from the study to the delivery on site.

The bobbin wound filters made of polyester reinforced with fiberglass, are fully anticorrosive, and have high mechanical, chemical and thermal resistance.

OPTIONS

Vinylester resin for ozone application < 0,4 ppm.

Manhole, ø 400 or ø 500 mm, made of stratified polyester, on collar with gel coated cover and O-ring.

Armhole made of stratified PVC DN200 (ø 225 mm), with solid PVC flange and flat butterfly joint, to position on collar.

Ø 110, 140, 200, 225 or 250 mm sight glass with PVC flange and PMMA window.

LED Inside lighting (only available with PVC flange and PMMA window)

Double-effect aeration valve, ø 1 1/2", on cover (mandatory if filter is positioned above water level).

Set of 2 ABS pressure gauges, ø 63 mm with glycerine bath, 0 – 4 bars, and 2 sample taps.

PVC collar flange netvic ø from 75 to 200 mm.

Colour on request, depending on quantities.

Manual, electric or pneumatic valve battery.

OTHER FILTRATION MEDIA

DAQUA filters are designed to work with all conventional filter media such as: sand, hydroanthracite or glass. But also with: zeolite, activated carbon (industry / drinking water / thermal baths, etc ...), biogrog (aquaculture), moerl (remineralization), calcite (neutralization), aquamandix (de-ironing and demanganization), corn cob (water loaded with fuel residues), etc ... Please indicate the chosen media during the request of quotation..
