

SAVE EVEN MORE WATER WITH BT-MARIC CONSTANT FLOW VALVES

In many applications there is a need to have the lowest possible flow rate. For long the lowest flow rate has been 0,4 lpm. Bertfelt Teknik has now added a range of constant flow valves with flow rates starting as low as 0,15 L/min.

Bertfelt Teknik is a manufacturer of constant flow valves with a complete range of flow rates. Our constant flow valves are simple, compact, durable, very precise and available in many connections/materials.

In the effort to help the customers to optimize their water flow rate and save water, Bertfelt Teknik are proud to have added 5 new flow rates below 0,4 L/min: 0,15 L/min, 0,2 L/min, 0,25 L/min, 0,3 L/min as well as 0,35 L/min. All with the standard accuracy of nominal flow rate +/- 10% over the whole pressure drop range 1,4-10 Bar.
